In the Claims

The status of claims in the case is as follows:

1.   [Currently amended]   A ~~navigation frame~~ graphical user interface, comprising:

a navigation frame;

a content frame;

a temporary data frame;

~~a screen display~~ said navigation frame including a customizable side bar initialized to display headers only;

dynamic HTML used by a navigator responsive to user input to change data presented ~~at said screen~~ in said side bar without ~~having to communicate~~ communicating with a remote server to selectively expand said side bar to ~~include~~ display in said navigation frame selection indicia corresponding to a header; and

15   said navigator responsive to user selection of said

16   selection indicia for communicating with said remote

17   server to access content data for display in [[a]] said

18   content frame.

1   2.   [Currently amended]   A ~~browser frame~~ graphical user

2   interface, comprising:

3   a navigation frame;

4   a content frame;

5   a temporary data frame;

6   said navigation frame including a plurality of header

7   boxes;

8   a box selector;

9   said header boxes being responsive to selector

10   positioning and actuation for toggling between expanded

11   and unexpanded modes without communicating with a

12   remote server, said expanded mode displaying included

13   item boxes and said unexpanded modes not displaying

14   said item boxes;

15   said items boxes being responsive to selector

16   positioning and actuation for communicating with said

17   remote server for updating said content frame; [[and]]

18   dynamic HTML used to control said navigator frame

19   responsive to user input to toggle header boxes between

20   said expanded and unexpanded modes in said side bar

21   without having to communicate with [a] said remote

22   server; and

23   said temporary data frame for holding current data in

24   said interface, directing calls to an application, and

25   making return data available to said application.

1   3.   [Currently amended] Method for presenting a navigation

2   frame in a browser window, comprising the steps of:

3   loading to said browser navigation frame header

4   information and item information for expanding

5   individual header tabs;

6   initializing said browser window to display only said

7   header tabs;

8   responsive to user selection of an individual header

9   tab, executing dynamic html to selectively toggle said

10   individual header tab between expanded and unexpanded

11   modes without accessing a remote server, said expanded

12   mode including the display of included item tabs and

13   said unexpanded mode not including said display; and

14   responsive to user selection of a target item tab,

15   communicating with said server to refresh a content

16   frame in said browser window; and

17   operating a temporary data frame in said browser for

18   holding current data, directing calls to a remote

19   server application, and making return data available to

20   said application.

1   4.   [Original] The method of claim 3, further comprising

2   the step of:

3   defining each said tab as a dynamic HTML division

4   capable of being moved relative distances and

5   selectively displayed and hidden in said display.

1   5.   [Original] The method of claim 4, further comprising

2   the steps of:

3

4   upon initial load, displaying all header tabs collapsed

5   and all menu tabs hidden; and

6   responsive to selection of a target header tab,

7   selectively moving, displaying, and hiding said tab

8   with respect to other tabs in said navigation frame.

1   6.   [Canceled]

1   7.   [Currently amended] A program storage device readable

2   by a machine, tangibly embodying a program of instructions

3   executable by a machine to perform method steps for

4   presenting a navigation frame in a browser window, said

5   method steps comprising:

6   loading to said browser navigation frame header

7   information and item information for expanding

8   individual header tabs;

9   responsive to user selection of an individual header

10   tab, executing dynamic html to selectively toggle said

11   individual header tab between expanded and unexpanded

12   modes without communicating with a remote server, said

13   expanded mode including the display of included item

14   tabs and said unexpanded mode not including said

15   display; [[and]]

16   responsive to user selection of a target item tab,

17   communicating with said server to refresh a content

18   frame in said browser window; and

19   operating a temporary data frame in said browser for

20   holding current data, directing calls to a remote

21   server application, and making return data available to

22   said application.

1 8. [Previously presented] A program storage device

2 readable by a machine, tangibly embodying a program of

3 instructions executable by a machine to perform method steps

4   for presenting a navigation frame in a browser window, said

5   method steps comprising:

6   loading to said browser navigation frame header ✓

7   information and item information for expanding

8   individual header tabs;

9   responsive to user selection of an individual header

10   tab, executing dynamic html to selectively toggle said

11   individual header tab between expanded and unexpanded

12   modes, said expanded mode including the display of

13   included item tabs and said unexpanded mode not

14   including said display;

15   defining each said tab as a dynamic HTML division   4

16   capable of being moved relative distances and

17   selectively displayed and hidden in said display[[.]];

18

19   upon initial load, displaying all header tabs collapsed   6.

20   and all menu tabs hidden;

21   responsive to selection of a target header tab,

22   selectively moving, displaying, and hiding said tab

23   with respect to other tabs in said navigation frame

24   without communicating with a remote server; and

25   responsive to user selection of a target item tab,
26   communicating with said server to refresh a content
27   frame in said browser window.

1   9.   [Previously presented] A computer program product or
2   computer program element for executing method steps for
3   presenting a navigation frame in a browser window, said
4   method steps comprising:

5   loading to said browser navigation frame header
6   information and item information for expanding
7   individual header tabs;

8   responsive to user selection of an individual header
9   tab, executing dynamic html to selectively toggle said
10   individual header tab without communicating with a
11   remote server between expanded and unexpanded modes,
12   said expanded mode including the display of included
13   item tabs and said unexpanded mode not including said
14   display;

15   defining each said tab as a dynamic HTML division

16   capable of being moved relative distances and

17   selectively displayed and hidden in said display;

18

19   upon initial load, displaying all header tabs collapsed

20   and all menu tabs hidden;

21   responsive to selection of a target header tab,

22   selectively moving, displaying, and hiding said tab

23   with respect to other tabs in said navigation frame;

24   and

25   responsive to selection of a target item tab,

26   communicating with said server to refresh a content

27   frame in said browser window.

---

1   10.   [Previously presented] The program storage device of

2   claim 7, said method further comprising:

3   defining each said tab as a dynamic HTML division

4   capable of being moved relative distances and

5   selectively displayed and hidden in said display.

1   11.   [Previously presented] The program storage device of

2   claim 10, said method further comprising:

3

4   upon initial load, displaying all header tabs collapsed

5   and all menu tabs hidden; and

6   responsive to selection of a target header tab,

7   selectively moving, displaying, and hiding said tab

8   with respect to other tabs in said navigation frame.
